For the past four months, Baltimoreans have been subject to a series of experiments. Some of the concepts, like the MOUSE project, have had mixed results; others, like the November 9 Red Line protests, have been largely successful. Now, as we all venture back into the workaday world of commuting, we can expect more of this type of guerrilla warfare. It's time to brace for the next wave of escalation, when those who ride public transit do so with a heightened awareness. Dawud Walid, executive director of the leftist group the Baltimore chapter of the Black Liberation Army, has been organizing with his people since before I came to Baltimore, and he said some of the ongoing problems stem from a lack of coordination. He talked about how people can't get away with the same kind of disrespect for the working class that they can on other public transit systems. "The working class is the big [objective] for us," Walid said. "And we know that the city is not invested in helping the working class. They will always be caught off-guard and taken advantage of by the white establishment." Walid said that this was why the Black Liberation Army helped lead the Red Line protests. "We're in a position to take action, and we need to continue to find ways to effect that action," he said. "That's where we are." (The text of this story has been edited.) Stay in the know. In the official documentation of the STM32L100RZC5 product, there is no documentation of how the Interrupt Flag is handled in the ISR. For example, how is the interrupt masked when a Bsp processor starts executing? A: The interrupt status register is cleared when the processor enters ISR. The interrupt enable register is set to 1 to signal the interrupt to the peripheral. And the interrupt flag is set to 1. This means that interrupt's are disabled at the beginning of the ISR. And that the interrupt enable register is set to 0. The present invention is directed to an apparatus for aspirating fluid from a region of a patient, particularly for performing lung lavage. The present invention is particularly suited for performing lung lavage, but may be used in any type of procedure where it is desired to aspirate fluid from a region of a patient. For performing lung 2d92ce491b
