I already have an already existing database with a lot of tables and I can create new tables. I'm a little bit confused about the 'new database' option, because I don't know if it's like 'new table' or something different. Thanks for your help A: First you need to make a connection to the database. Once you have done that, you can select the database you want to create in the upper left hand corner. There is a drop down box that says 'new'. Then click on it. You will see a box pop up asking you to enter the name and the server. After that it should ask you for your credentials to continue. You can choose to use your existing user name and password. Sunday, December 3, 2013 "Color me … sunnier than a pumpkin" It's the middle of December, and the weather is still a bit too warm for my liking. I like sunshine. I don't mind cloudy skies. In fact, the more clouds, the better. But I feel like it's almost too hot out there, and it makes me more tired than usual. I don't feel like working on my homework today. I don't have much of an appetite for it either, so I opt for reading. My two favorite books right now are, The Hunger Games by Suzanne Collins and The Hobbit by J.R.R. Tolkien. The Hunger Games is about a young girl named Katniss Everdeen, who is chosen to fight to the death in a televised battle called the Hunger Games. The best-selling books are set in a dystopian future where the country is divided into twelve districts, and the winners of the games get a "tribute" from the people in the other districts who have lost. This story is a slow burn and the books can be a

Author: Robin Nash Working through the code to move the data from the client-side to the server is the most time consuming task on a web page. What if we could reduce this step by only sending the data needed? This is the idea behind Push Notifications using Socket.IO and Pusher. Pusher is an API that allows you to send, receive, and fire off messages across any API and their clients. Web sockets are ideal for building a rich messaging API because they allow you to send and receive messages without polling for an open socket. Node.js plays a significant role in the social media sphere. According to a report by NodeSource, the number of GitHub repositories with "node.js" in their name has risen to an all-time high. This is indicative of the fact that Node.js is a platform that can be used to develop web apps with built 2d92ce491b
