A: The server is most likely sending the headers before it has sent the contents of the page. If you're on a Mac, I'm assuming you're in the browser (i.e., not a screen reader), so you can hit cmd+U to open up the Developer Tools and see what it is actually getting. Go to the Network tab and see what it's doing. Note that this does not look like the character encoding problem you were experiencing. This appears to be a different type of problem. A: I tried to read the original text as downloaded from the page, but it was locked by the browser. In my case, it was Chrome, and a similar situation. Using another browser solved the problem. I Am Not an Angel. My Angel Is My Son - tokenadult ===== tptacek At the top, how do we know that any of the people whose deaths are being recorded here are even really dead? I'd guess that most of the people we're tracing all of them are just staying alive by the grace of medical technologies. ~~~ defen I don't know if anyone else thinks the same thing, but I really wonder how we could possibly know how many people we've lost, even if we could figure out how. It's just impossible to know, and any attempt to try would likely involve errors of omission. ~~~ sudont I suspect that it's a pretty straightforward metric to measure (kill people, is that it?). My guess would be that the metric has recently exceeded some threshold. ----- general\_failure What a sick person you are. This invention relates to apparatus for the removal of an oil bearing sludge from a sump-type oil storage tank and, more particularly, to such apparatus in which the sludge is returned to the tank by being gravity fed to an inlet port at the top of the tank and is then deposited in the tank upon being allowed to slide down an inclined surface. The prior art contains a number of teachings relating to the removal of oil sludge from a sump-type oil storage tank. For example, U.S. Pat. No 2d92ce491b
