Metastatic melanoma is an aggressive disease with high mortality, even in the era of targeted therapies. In metastatic melanoma, as in most solid cancers, a multidisciplinary approach is recommended. Given its impressive efficacy in the first-line setting, the BRAF inhibitor vemurafenib is an important treatment option, not only for patients with BRAF-mutated melanoma, but also for those harboring BRAF wild-type disease. Although early in the treatment course, tumor responses are rapid, the durability of response is short. Once progressing, the median duration of response is only 8.5 months. At present, a multidisciplinary approach remains the standard of care. However, the efficacy of vemurafenib at progression is consistent with a newly developed disease-specific response, which is a durable response to systemic therapy. Future studies will elucidate whether treatment algorithms guided by the introduction of new agents (eg, monoclonal antibodies) may optimally exploit the full antitumor activity of current therapy. The present invention relates generally to an electrical connector and, more particularly, to a lock for a blind mate design of a contact arm. The use of high speed serial data transfer in electronic devices is common today. A serial transceiver receives serial data and transmits data as parallel data by implementing a shift register in the serial transceiver. Typically, a clock signal is also transmitted using the serial data. The clock signal is used in the receiving end to detect the data transmitted during a frame interval. In designing the serial transceiver, a circuit design must be able to support several standards, including an IEEE 1149.1 standard. This standard defines a protocol for the exchange of information between a chipset, such as a serial peripheral interface (SPI) chip, and a processor. The 12-bit address pins are

The population was 37,935 at the 2010 census. Issaquah is mostly served by schools in the Marymoor School District, with the western part of the city zoned to Shoreline Community College and most of the city zoned to Lakewood High School. Port Mercer High School is in the eastern part of the city, with Mercer High School in Issaquah Highlands. The University of Washington (UW), which moved from Seattle to Issaquah in 1908, is in the northwest part of town. History The area was originally owned by the Anderson family. After the arrival of the railroad in the 1880s, Issaquah was gradually developed as a suburban area of Seattle. It served as the winter home of the UW and as an area for wealthy commuters who worked in Seattle. Many of the houses and streets of the city were named after locations in Issaquah, like the Lake Washington Boulevard and Lake Ingraham Parkway, which are still in use today. In the early 20th century, when Asian immigrants arrived to the area, they settled in what is now the south side of Issaquah. The Japanese American community in Issaquah formed over time with the crowding of school districts and until the late 1960s. In June 1964, the Issaquah Library was dedicated by Mayor Charles S. Cross. In October 1964, it had 1,974 volumes of which 1,263 were children's books. In October 1965, it had 2,5 ba244e880a
