A: The signature is old as it was generated in 2013. The malware is obviously new and no antivirus can detect it so far. Note that the malware comes in two variants, a.exe and a.exe. The.exe is the main executable which displays a fake message like "Updater for your software" and starts the other executable. When you execute this.exe, it actually executes the other executable with elevated privileges. The file 2d92ce491b
