Informatica Analytics 11.1.1.0 - ... SQL Server Management Studio (SSMS) is the most commonly used tool for SQL Server administration and development. This download is for the SQL Server Management Studio (SSMS) and SQL Server Data Tools (SSDT) only. When using this package, you must also download and install a full version of Microsoft SQL Server or the Microsoft Azure Data Warehouse SQL Server LocalDB tool. Only SQL Server LocalDB is required for SSMS/SSDT. When you first install SSDT, you need to run the Setup program. If you are prompted to install a SQL Server product, select Yes. If you are prompted to install Microsoft SQL Server 2016, select Yes. When the Setup program runs, it displays a license agreement and then opens the SQL Server Installation Center. For SQL Server 2016, the default installation location is C:\Program Files\Microsoft SQL Server\110. You need to select a language for the installation. If you do not select a language, the default language for the selected installation will be selected. If you already have a previous version of SQL Server installed on your computer, you can install a new version of SQL Server on the same computer if the following requirements are met: You must be running the default language for the version of SQL Server you are installing. You must be running the same operating

system that you are installing SQL Server on. For example, if you are installing on Windows 10, you must be running Windows 10. For more information, see [Installing SQL Server 2016](#). When you have completed the installation, you need to install Microsoft Office. Only the installation files for Word, Excel, PowerPoint, and Outlook are included in the installation program. For instructions on how to install Microsoft Office, see [Microsoft Office 2016 - How to install on a computer that is not part of a workgroup](#). After you have completed the installation of the required software, you can start the SQL Server setup program. Start Microsoft SQL Server Go to the Control Panel, and click Programs. In the search box, type the following name, and then click OK: `msiexec.exe /i Setup.msi` At the prompt, press ENTER. On the Welcome to Microsoft SQL Server page, click I will install SQL Server 2016. On the Welcome to the installation program page
