Activate the keygen and you will be asked to choose the path to the directory where you installed the game. Press Start to activate the keygen and it will automatically start to generate a key. Press x and you will be asked to choose the email and password for the new Autocad key. Press x again to save the key in a file. On your Autocad you will find the generated key in the "Autocad keys" folder. Click on the generated key and you will be asked to activate it by entering the email and password you created when you activated the keygen. Close Autocad and login again to your Autodesk account and then start Autocad and the game will ask to activate the key again. Repeat this step for any other application you want to use, that require a code to run the game, but if you want to use some of the other features of Autocad such as versioning, etc, you will need to generate a key for Autocad first.
