No author may be copied.[Hematuria and proteinuria in children with urinary tract infections. Apropos of 135 cases]. A prospective study, on 135 children, hospitalized for acute urinary tract infections between january, 1982 and june, 1983, was undertaken to assess the value of 24 hours urine analysis to distinguish between cystitis and pyelonephritis. The method used was that of monofloral or polyfloral hematuria and proteinuria. The most sensitive and specific discriminator was proteinuria greater than 0.5 g/l. Overall accuracy was 0.88. Complete results were obtained on 87% of the children, which emphasises the importance of this simple non invasive test for the management of urinary tract infections in children./* * Copyright (C) 2009 Michael Brown . * * This program is free software; you can redistribute it and/or * modify it under the terms of the GNU General Public License as * published by the Free Software Foundation; either version 2 of the * License, or any later version. * * This program is distributed in the hope that it will be useful, but * WITHOUT ANY WARRANTY; without even the implied warranty of * MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE.
