GFI MailEssentials For Exchange SMTP Crack Product Key [Mac/Win] [Latest 2022]

What's New In?

GFI MailEssentials is a server-based anti-spam, anti-phishing and email management solution that can be used to secure the outbound flow of email from Exchange and SMTP servers, including Exchange 2003, and Exchange 2007. The following features are included in GFI MailEssentials: Automatically Filter outbound email - the best-of-breed SPAM and virus scanning engine (SpamAssassin) is used to scan email before the outbound flow from Exchange/SMTP servers. GFI uses powerful Bayesian filtering technology to automatically classify email as spam or non-spam, and classify email as phishing or legitimate. Disclaimers - GFI includes a series of disclaimers which can be used to convey the sender's "branding" (such as business, social, and political) into the recipient's inbox. List Server - A server-based email list management tool is included which allows you to create and send your own custom email newsletters, messages, and announcements. The following features are available for purchase separately: GFI MailEssentials Advanced Spam Filtering (ASF) includes all of the features of GFI MailEssentials, except for the anti-spam and anti-phishing engine. It is the ideal solution for Exchange/SMTP administrators with a requirement for advanced spam filtering and reporting. Internet Mail Reporting (IMR) includes all of the features of GFI MailEssentials, except for the disclaimer feature. The IMR reports emails which failed to deliver, and enables email administrators to trace and identify outbound and inbound email delivery problems. List Server & Scanner (LSS) is an optional add-on which can be used to send email newsletters, messages, and announcements to email lists. It also supports the scanning of public and private email lists. License: GFI MailEssentials is available as a 2, 3, or 4-user license, and can be purchased with multiple concurrent users (suites) or as an individual license. System Requirements: All Exchange 2003 and Exchange 2007 servers are supported, with a minimum of Exchange 2007 SP1. GFI MailEssentials can also be installed on Exchange 2003 servers and Exchange 2003 PAM/Postfix mail servers. New Features in V1.1.1.1: Internet Mail Reporting (IMR) is now available as an option on V1.1.1.1. It includes all of the features of GFI MailEssentials, except for the disclaimer feature. The IMR reports emails which failed to deliver, and enables email administrators to trace and identify outbound and inbound email delivery problems. License: GFI MailEssentials is available as a 2, 3, or 4-user license

System Requirements:

Windows 10, 10 Pro, 8, 8.1, or 7 64-bit 1 GB RAM 1.3 GB free space on Hard drive (other than saved games, browser cache, and installed mods) DirectX 9.0c Windows Vista SP2 Windows XP SP3 Mac OS X 10.5 or above Minimum resolution 1,280x800 1 GHz CPU 512MB video card DirectX 10 capable video card recommended for frame rate at 860x480 or above
