2. Open AutoCAD and click on File | Open Project. 3. In the Project Name field, type Python project (make sure that you type Python, don't type Python Project). 4. A dialog box with the name Python project should open. 5. Click the OK button. 6. Click Yes in the dialog box that says 'Do you want to save the project file?'. 7. Click the OK button to open the project file. 8. Click on Open Project File. 9. The Python project should open. Creating a project The Python project contains a main (or starting) window called 'Python Project'. It is located in the folder created by the Python application. In the Figure 3-9, you can see the main window of the Python project. Figure 3-9: The Python project in Autodesk Autocad. Creating a Python program in Python A Python program is used to perform a specific function. For example, in the 'Python project' main window, there is a function called 'Python function' which can be used to execute a Python program. In the figure above, the default menu is opened. If you click on the Python function, you can view the Python function code and function parameters. When the Python function is executed, the input parameters can be used in the function. You can perform some operations on the input parameters and then return the output parameters to the main window to be used by Autodesk Autocad. To create a Python program, do the following: 1. Start the AutoCAD Python. 2. Click on File | Open Project. 3. In the Project Name field, type the Python project name. 4. Click on OK. 5. Click on Open Project File. 6. Click on Edit | Start Programming. 7. In the Open Project dialog box, click on the Python project. 8. Click on Start Programming. 9. The Python project should be opened in the main window. 10. In the Python project, click on the View Editbox text. 11. In the top text window, type the name of the Python program, which is User input function. 12. Click the button named Edit. 13. In the top window, the Python function code is displayed.
