Configuration Settings: Zeta Telnet is a very simple Telnet client that can connect to remote machines, and provides the possibility to configure the Telnet session. This is a very basic Telnet client for Windows, designed to be portable and very simple. If you have basic requirements, this client is the right tool for you. There is no alternative on Windows, and we don't think there will be. This client is for basic purposes, it is simple, well-designed and lightweight. The main function of this tool is not to allow you to change the configuration settings of your remote machine, it is designed to simply connect to the remote host and allow you to communicate with it through a Telnet session. Runs out of the box, simple interface Zeta Telnet is such a client, built with simplicity in mind. This edition is a portable one, which has the advantage of sparing the user of an installation process. Basically, double-clicking on the downloaded executable file launches the application without having to go through any other process. The interface is straightforward and does not feature any bells and whistles: just

a terminal window waiting for command input. Suffice to enter the address of the host and the port for conducting the communication and Zeta Telnet is ready to receive the commands for the remote machine. Configuration settings

There aren't too many options available in the program, but the developer added the possibility to end the connection at any time from a button available in the upper part of the screen. Additional options include saving a log of the session to plain text file (TXT) and stripping the Ansi code in order to have a more clear view at the information. Although this is a simple application, the developer makes available the possibility to customize its looks, also in order to the terminal window less stressful on the eyes. As such, both the foreground and the background colors can be changed.

Telnet is a network protocol used to transfer files between a computer and another one, or even to transfer a whole system over the Internet. It can also be used to make a remote terminal available from a computer. Espinho is a civil parish in the municipality of Lagos, Portugal. The population in 2011 was 9,748, in an area of 14.19 km². History In the Middle Ages, Espinho was one of the most important cities of the Lagos region, due to its strategic importance in controlling access to the Lagos Estuary. This stronghold was conquered in the 13th century by the Archbishop of Braga. It was conquered by the Braganza family on 14 August 1385, as a result of their victory

in the Battle of Aljubarrota against the English. After the Peninsular War, the city was a military outpost of the Portuguese Empire, but was abandoned in the 19th century. Places of interest Churches Nossa Senhora do Ó, dedicated to Our Lady of Nazareth, was built in the 16th century. The church has a nave, two aisles, a transept and a presbytery with a half-gable. Nossa Senhora de São Salvador, dedicated to Our Lady of Salvation, was built in 1684. The construction of the church was abandoned in 1699. It is located in the town centre, at the junction of streets Maria Antonia da Costa, António Alves and Teles de Morais. Castles and fortifications Espinho was part of a larger wall that surrounded the medieval city of Lagos. There is a castle in Espinho, to the north of the town, with walls constructed by João de Castro. It is adjacent to the church of Nossa Senhora do Ó and is located on the edge of the old wall. Civic Espinho has two plazas: Praça de Eugénio de Almeida, and Praça do Marquês de Pombal.
