It took me awhile to play this game but I finally finished it today. I love the steam punk atmosphere. The world was really well developed, and the game follows the storyline for most of it (I actually ended up not reading the manual). I think the story was a nice touch to the game as well. I'm not sure how it's done in the game, but the character moves around on a journey of self-discovery, I guess. I'm not sure if there's a way to skip the dialogue but I think that it's a good addition to the game as it breaks up the gameplay. The weapon upgrades really helped with it as well. I liked how the gameplay was made a bit different for the class change. I have an issue with the start up of the game. I'm not sure if I'm able to describe it so here goes. The thing is, the game has a make-your-own-character option, but if you do you are not able to move the game from the main menu until you have walked on the ground outside of the setting of the town. I'm not sure if I made any sense at all. I'll be sure to write more soon.Discovery and optimization of novel CB2 agonists, potent, orally active, and efficacious in acute and chronic experimental pain models.
