Written by Andrey from CodeMirror Team on Friday, December 01, 2012, 19:12 Based on AtomText editor, CodeMirror is a versatile JavaScript component for text editing, providing a rich feature set, font styling, syntax highlighting, line numbering and selection, paste extraction and mode-specific options. The preview is free, but the open-source version requires a license key. Please check if your license key is valid for this version or not. If license key is valid, then download the v1.19 binary from the link below. If you cannot find your license key, contact oracle to get it. The Fastest Speed Ever We improved the speed and performance of the library. Now we can beat the speed record: 1242.858ms. The Fastest Speed Ever We improved the speed and performance of the library. Now we can beat the speed record: 1242.858ms. Free Syntax Highlighting The preview is free, but the open-source version requires a license key. Please check if your license key is valid for this version or not. If license key is valid, then download the v1.19 binary from the link below. If you cannot find your license key, contact oracle to get it. Conclusion Meaningful Changes The last release was late Spring 2013. It brought changes and improvements, but the most important ones are not included in the public preview. Introduction Is there a better editor for your HTML5? Probably. But maybe not an exact match. There are no exact matches as you might expect. CodeMirror provides a set of interfaces to extend its behavior. These can be customised by inheriting an editor class, providing new abstract methods, and registering callbacks and classes. If you are familiar with building a webapp, then you know that one of the most common tasks is to set a textarea's value. For example, you might get some text from the user, and then want to process it to make it editable. Or, you might want

What's New In Ice Castles Theme?
