virtual machine, running on Windows 2008 R2. It is a smart desktop tool that continuously monitors Hyper V, a Microsoft virtual server, across your network and more importantly, it empowers you to manage / configure those VM's in real-time and ensures your mission-critical applications run smoothly.

ManageEngine Free HyperV Configuration Tool tool also fetches comprehensive and categorized data about the servers and its Virtual

---

Machines and provides them in a graphically-explorable dashboard that offers a quick glance of the high-level status of the virtual server and its (VM's). Hence, you can have a glance of the entire server health and virtual machine health to take the right management decisions for your server and/or VM's and make them always ready for any requirements or situations.

Key Features: - Available for Windows Server 2008 (R2), Windows Server 2008 (R2)

---

x64, Windows Server 2008 (R2) (x86) - Provides a graphical user interface to perform Hyper-V configurations (increase / decrease RAM capacity, allocate more number of CPU to Virtual Machines etc.), and also remotely execute 'power operations' on the Virtual server or suspend the VM's - Measures the actual resource utilization of the virtual server and provides a real-time report of the same to provide improved

---

efficiency and resource utilization - Identifies the remote machines that are in hyper-v fail over state - Fetches comprehensive and categorized data about the server and its VM's - Provides the server and VM's health-check in a convenient, real-time dashboard - Gives you high level server health or Virtual machine health status in a convenient, real-time visual map, tree-view and graphically easy to comprehend - Identifies the

---

load patterns of the virtual machine in a graphical report - Identifies the network utilization of each VM - Identifies the CPU, memory and disk utilization of each VM - Supports the boot-order for each VM. It can boot from any number of devices (hard-disk, CD-ROM, Network, PXE boot etc.) - Supports the boot-order for each VM - Provides the boot-order for each VM - Provides the Windows Server 2008 (R2) fault-tolerance details for each

\* Free HyperV Configuration Tool is a Remote Administration tool that is developed by ManageEngine. It automatically deploys a HyperV Server on Windows Server 2008/2008 R2 Operating Systems. \*  
HyperV is a platform which virtualizes physical resources like CPU and RAM in the Virtual Machines. \*  
With the help of this tool, you can see information like

---

Virtual Machine name,  
Hardware status, Boot  
Order, Physical memory,  
Processor utilization, CPU  
Utilization, Disk utilization  
and Network utilization. \*

This tool is specially  
developed for non-Microsoft  
Computers. \* The tool is web  
based; thereby you have to  
connect to your machine via  
Internet and run the tool  
from the ManageEngine site.
